What's going on in the lone star state capital is cool? Ask the locals. Callie Hernandez, assistant manager, Maya Star boutique: Woodland Restaurant (1716 S. Congress Ave.; \$\$) is like my second home. I always get stuffed tomato with asiago cream sauce. Nils Juul-Hansen, producer-director: On hot evenings, take a dip in Barton Springs, a natural limestone pool that holds steady at a cool 68 degrees. Free swimming from 9 a.m. to 10 p.m. is especially fun. Kiah Denson, artist: Shop Schatzlelein (1713 S. First St.) for vintage trinkets and pieces from regional artisans. There's something for everyone, no one. Joshua Bingaman, Founder, Progress Coffee: I'm crazy about the new Easy Tiger (709 E. Sixth St.), a bakery and beer garden tucked away downtown. The pretzves are amazing! Ed Hughey and Kerri Keaton Hughey, founders, Wellgro Co.: Catch a Movie at Violet Crown (434 W. Second St.), an art-house theater with dedicated seats and a full-service café. Shannon Hollis, co-owner, Method Hair salon: Mango-habanero margarita in Takoba (1411 E. Seventh St.; \$\$) is a must - sweet, sour and spicy. Perfection. Read more Back to top orthopedic surgeons are highly trained doctors who specialize in diagnosing and treating musculoskeletal maladies, says the American Academy of Orthopedic Surgeons. This system includes everything your body uses when you move and are active, including muscles, bones, tendons and nerves. An orthopedic surgeon can deal with such conditions as injuries, arthritis, birth defects and tumors. This specialty was once devoted exclusively to children, but is now open to people of all ages, from infants to the elderly. Orthopedic surgeons have spent as many as 14 years in training before becoming licensed, according to the American Academy of Orthopedic Surgeons. We will spend the first four years with a bachelor's degree at a four-year university and the next four will be spent in medical school. Graduates will then move to residential programmes in real under the supervision of a specialist. Orthopedic residential programs last five years. Once the stay is over, candidates must pass a U.S. Medical Licensing examination in order to practice independently, and then pass exams given by the American Council of Orthopedic Surgeons to be accredited in their specialty. Orthopedic surgeons continue their education throughout their careers to remain relevant. There are many areas of subspecialties in orthopedics, including wrist, hip, pediatrics and trauma, but the American Council of Medical Specialties recognizes and provides certification in just two subspecialties: hand surgery and orthopedic sports medicine. Each sub-specification requires an additional year of training at the end of the stay. Hand surgeons deal with injuries and diseases of the hands, wrists and forearms, says the American Academy of Orthopedic Surgeons, while those who focus on sports medicine address injuries and concerns unique to athletes. Surgeons must undergo a rigorous examination before they can become certified in one of these subspecialties. Despite what their job titles suggest, orthopedic surgeons don't just perform surgeries. They examine their patients to discover the right diagnoses and create treatment plans for restoring health and mobility. A treatment plan may include surgery, or it may involve medication, therapy or exercise, with surgery being a last resort if all else fails. Orthopedic surgeons oversee the rehabilitation and recovery of their patients and carry out plans to prevent further injury or slow the progression of the disease. Orthopedic surgeons use various surgical techniques to treat patients, depending on a specific disease or injury. Common procedures include: arthroscopy, where small cameras are used to create pictures from internal joints; fusion, where broken or separated bones are welded together; internal fixation, where the bones are held in place by metal rods or screws during the healing process; soft tissue repair; joint replacements. Doctors and surgeons earned a median annual salary of \$204,950 in 2016, according to the U.S. Bureau of Labor Statistics. At the lower end, doctors and surgeons earned a 25 percentile salary of \$131,980, meaning 75 percent earned more than that amount. The 75th percentile salary is \$261,170, which means 25 percent earn more. In 2016, 713,800 people were employed as doctors and surgeons in the US.
